Civic Readiness Portal — Technology Department Brief

Eight integration items required to promote from staff pilot to full launch. None are needed before pilot.

For: Great Neck Public Schools Technology Department **From:** Social Studies Department **Re:** NYS Seal of Civic Readiness tracking portal — integration asks **Date:** May 4, 2026

What this is

An open-source web portal for tracking the New York State Seal of Civic Readiness — the +1 Diploma Pathway distinction approved by the NYS Board of Regents in 2021. The portal collects civic-knowledge data (auto-pulled from Infinite Campus where possible) and civic-participation evidence (service hours, projects, capstones submitted by students with supervisor and counselor verification). At year-end it produces a NYSED-compliant audit pack and a roster CSV for the transcript office.

Phase 1 has zero IT dependency. The application ships on free-tier SaaS (Vercel + Supabase + Resend), runs at \$0/mo, and gives Social Studies a working URL within ~4 weeks of development start.

The items below are required only to **promote from Phase 1 (staff pilot) to Phase 2 (full launch with student-facing portal, district SSO, and live Infinite Campus integration)**. They are listed in the order they typically need to be addressed.

What we're asking of GNPS Technology

#	ASK	EFFORT	OWNER
1	NYSED district application (Application Business Portal) – gates <i>awarding</i> of seals on transcripts	~30 days state review	Curriculum & Instruction (not IT)
2	Domain CNAME – point civicseal.greatneck.k12.ny.us (or chosen subdomain) to Vercel	~5 minutes	Network/DNS
3	FERPA / privacy review of the Phase 1 architecture (Supabase US-East, encrypted at rest + in transit, role-based access, full audit log); sign Supabase DPA if district policy requires	~1–2 hours	Privacy/Compliance + IT
4	SSO integration – choose ClassLink / Google Workspace / Azure AD; configurable in Supabase Auth providers (no application code change)	~1 day	Identity Management
5	Infinite Campus integration – read access to roster, course enrollment, Regents scores. Either OneRoster API or nightly CSV/SFTP export works	~2–4 hours scoping; setup varies	SIS Administrator
6	Email reputation – supervisor confirmations send from civicseal@greatneck.k12.ny.us . Either use district SMTP creds, or keep Resend and add SPF/DKIM records to GNPS DNS for the subdomain	~30 minutes	Email Administrator
7	Website integration – choose one of: (A) subdomain CNAME [recommended], (B) iframe embed in Finals site page, (C) reverse proxy via Finals site or Cloudflare	A: 5 min · B: 30 min · C: ½ day	Web team
8	Long-term hosting decision – keep free-tier Vercel + Supabase under a district-paid account (handles GNPS scale for years), or self-host the same code on GNPS infrastructure. No code changes either way	District policy decision	IT Leadership

Architecture summary (Phase 2 target)

Cost trajectory

PHASE	VERCEL	SUPABASE	RESEND	TOTAL
Phase 1 (free tiers)	\$0	\$0	\$0	\$0/mo
Phase 2 (typical at GNPS scale)	\$0	\$0–25	\$0	\$0–25/mo
Self-hosted alternative	GNPS infrastructure + ops time	Same	District SMTP or Resend	District-internal cost

GNPS scale (~6,800 students; ~412 per graduating class) fits comfortably within all three free tiers for years. Supabase Pro at \$25/mo only becomes relevant if the district wants daily backups beyond the free-tier point-in-time recovery, or if the database exceeds 500 MB (unlikely until ~year 5 at GNPS scale).

What we are NOT asking

- **No new infrastructure procurement.** Phase 1 doesn't touch GNPS infra.

- **No vendor contracts to negotiate.** All Phase 1 services are usable on free tiers under district-owned accounts or under existing personal accounts during pilot.
 - **No proprietary lock-in.** Codebase is MIT-licensed and portable. If the district later decides to self-host, that path is supported with no application code changes.
 - **No student data leaves the United States.** Supabase US-East region is the only data-residency point.
 - **No CMS migration.** Finals site stays as-is. Integration option A (recommended) is just a DNS CNAME alongside existing Finals site hosting.
-

Why this benefits GNPS

1. **Closes a competitive gap.** Peer Long Island districts (Seaford, 3 Village, Connetquot) already publish Seal of Civic Readiness pages. GNPS has no program; this fixes that on a fast timeline.
 2. **Better than peer implementations.** Peer districts use Microsoft / Google Forms feeding counselor inboxes — no central tracker, manual roll-up, end-of-year crunch. The proposed system gives counselors a live roster and produces NYSED audit packs automatically.
 3. **Open-source positioning.** Repo is MIT-licensed and forkable. Other NYS districts can adopt the GNPS implementation rather than building their own — a leadership artifact for Curriculum & Instruction and the Board.
 4. **Phased risk.** Phase 1 is reversible. If the system doesn't deliver value in pilot, IT involvement never escalates. If it does, Phase 2 promotion is well-scoped.
