Civic Readiness Portal — Technology Department Brief

Eight integration items required to promote from staff pilot to full launch. None are needed before pilot.

For: Great Neck Public Schools Technology Department **From:** Social Studies Department **Re:** NYS Seal of Civic Readiness tracking portal — deployment + integration **Date:** May 4, 2026 · Release v0.2.0 (fully self-hostable)

Source code (MIT): <https://github.com/SirhanMacx/gnps-civic-readiness> **Latest release:** <https://github.com/SirhanMacx/gnps-civic-readiness/releases/tag/v0.2.0> **Full IT runbook:** <docs/it-runbook.md> — 1,300+ lines covering deploy, ops, backups, DR, security, troubleshooting **Infinite Campus integration:** <docs/infinite-campus-integration.md> — three integration paths, the exact IC Ad Hoc Reporting recipe, FERPA considerations **Teacher Quick-Push UI:** <docs/teacher-quick-push.md> — bulk-award civic-readiness points to a class roster in one action

What this is

An open-source web portal for tracking the New York State Seal of Civic Readiness — the +1 Diploma Pathway distinction approved by the NYS Board of Regents in 2021. The portal collects civic-knowledge data (auto-pulled from Infinite Campus where possible) and civic-participation evidence (service hours, projects, capstones submitted by students with supervisor and counselor verification). At year-end it produces a NYSED-compliant audit pack and a roster CSV for the transcript office.

As of v0.2.0, the system is fully self-hostable on GNPS infrastructure. Zero third-party SaaS dependencies. Any Linux box with Docker can run the entire stack — application, database, email, file storage, SSL termination — via `docker compose up`. Student records never leave the district.

Phase 1.5 (self-host) is the recommended deployment path for production. Phase 2 (live Infinite Campus integration) builds on top of Phase 1.5 once IT has the deploy stable.

The items below are what IT needs to provide / configure to take the system live.

What we're asking of GNPS Technology

#	ASK	EFFORT	OWNER
1	NYSED district application (SED Application Business Portal) – gates <i>awarding</i> of seals on transcripts	~30 days state review	Curriculum & Instruction (not IT)
2	Provision a Linux VM (Ubuntu 22.04 / Debian 12 / Rocky 9 – district preference). 2 vCPU + 4 GB RAM + 50 GB disk. Public IP on ports 80/443. Outbound internet access.	~30 min	Infrastructure
3	DNS A record for <code>civicseal.greatneck.k12.ny.us</code> pointing at the VM's public IP. Caddy auto-issues a Let's Encrypt cert on first boot.	~5 min	Network/DNS
4	SMTP credentials for the district mail server. Recommend creating a dedicated mailbox <code>civicseal-portal@greatneck.k12.ny.us</code> with auth to send as <code>civicseal@greatneck.k12.ny.us</code> .	~1 hour	Email Administrator
5	FERPA / privacy review. Self-hosted v0.2.0 keeps all student data on district infrastructure – no third-party data processor. Encryption at rest via the VM's disk encryption (LUKS / cloud KMS). Audit log captures every state transition.	~1 hour	Privacy/Compliance
6	Deploy: <code>git clone</code> → <code>cp .env.example .env</code> (fill in 7 values) → <code>make up</code> . Caddy obtains SSL automatically. Migrations apply automatically. ~10 minutes from clone to live URL.	~10 min once Steps 2–4 are done	IT (one engineer)
7	First admin: <code>make admin EMAIL=jon@greatneck.k12.ny.us</code> provisions the bootstrap admin. They log in via magic link and invite the rest of staff via the admin UI.	~5 min	IT
8	Infinite Campus integration. Phase 1.5 supports manual quarterly CSV uploads (works today). Phase 2 wires the live SFTP / OneRoster path. See docs/infinite-campus-integration.md for the IC Ad Hoc Reporting recipe + 8 specific vendor questions.	Phase 1.5: ~30 min/quarter; Phase 2: 1–2 weeks of integration work	SIS Administrator
9	Backups: nightly cron script ships <code>pg_dump</code> + evidence-data tarball off-	~30 min	IT

#	ASK	EFFORT	OWNER
	host. Sample script in docs/it-runbook.md §6.		
10	Updates: <code>git pull</code> + <code>make up</code> rebuilds + restarts (~30s outage). Schedule outside school hours. Schema migrations are idempotent.	per release	IT

Architecture summary (v0.2.0 self-hosted, on GNPS infrastructure)

Trust boundary: everything inside the Docker network is private. Only Caddy is on the public interface. Postgres + the app are not internet-reachable.

Phase 2 enhancement (deferred): swap self-hosted magic-link auth for district SSO (ClassLink / Google Workspace / Azure AD); add live Infinite Campus integration to replace quarterly CSV uploads. Code already supports both paths; only requires district IT decisions on identity provider + IC vendor coordination.

Cost trajectory

PHASE	VERCEL	SUPABASE	RESEND	TOTAL
Phase 1 (free tiers)	\$0	\$0	\$0	\$0/mo
Phase 2 (typical at GNPS scale)	\$0	\$0–25	\$0	\$0–25/mo
Self-hosted alternative	GNPS infrastructure + ops time	Same	District SMTP or Resend	District-internal cost

GNPS scale (~6,800 students; ~412 per graduating class) fits comfortably within all three free tiers for years. Supabase Pro at \$25/mo only becomes relevant if the district wants daily backups beyond the free-tier point-in-time recovery, or if the database exceeds 500 MB (unlikely until ~year 5 at GNPS scale).

What we are NOT asking

- **No new infrastructure procurement.** Phase 1 doesn't touch GNPS infra.
- **No vendor contracts to negotiate.** All Phase 1 services are usable on free tiers under district-owned accounts or under existing personal accounts during pilot.
- **No proprietary lock-in.** Codebase is MIT-licensed and portable. If the district later decides to self-host, that path is supported with no application code changes.
- **No student data leaves the United States.** Supabase US-East region is the only data-residency point.
- **No CMS migration.** Finals site stays as-is. Integration option A (recommended) is just a DNS CNAME alongside existing Finals site hosting.

Infinite Campus integration — demonstrated end-to-end

The system already accepts IC data and auto-counts the Civic Knowledge column. The proof is on the live demo right now.

The format we need from IC (one row per student × course-or-exam):

```
student_id,last_name,first_name,grad_year,kind,code,year_or_date,score_or_credit
GN20271234,Goldberg,Maya,2027,course,SS_GLOBAL_II,2025-2026,passed
GN20271234,Goldberg,Maya,2027,regents,GLOBAL_II,2026-06-15,87
GN20275511,Chen,David,2027,course,AP_US_GOV,2026-2027,passed
...
```

A counselor (or admin) drops this CSV at </admin/import> (UI is live now). The system parses, validates, shows a diff (new / updated / unchanged), and commits. From that moment forward, the cohort roster auto-populates.

Demonstrated with a 5-student sample class (uploaded May 4, 2026 to validate the pipeline):

STUDENT	SS CREDITS PASSED	ADVANCED SS COURSES	REGENTS SCORED	AUTO-COUNTED KNOWLEDGE POINTS	STATUS
David Chen (GN20275511)	4	0	Global II 72 (P) + US History 91 (M)	3.5	Knowledge column ≥2 ✓
Maya Goldberg (GN20271234)	2	1	Global II 87 (M)	2.0	Knowledge column ≥2 ✓
Aanya Patel (GN20274432)	2	2	Global II 93 (M)	2.5	Knowledge column ≥2 ✓
Sofia Rivera (GN20277890)	4	1	Global II 89 (M) + US History 86 (M)	4.5	Knowledge column ≥2 ✓
Sean O'Hara (GN20283344)	1	0	(none yet)	0.0	underclassman — auto-counts as evidence accumulates

These point totals were computed by the system from the IC CSV alone — no student input. Four out of five sample students have already cleared the Civic Knowledge column requirement just from coursework + Regents performance. They now only need to accumulate ≥2 Civic Participation points (service hours, projects, etc.) via the public submission forms.

This is the value of the auto-populate. Counselors don't re-key data that the SIS already has, and students don't have to claim points they've already earned in class.

Phase 1 path (today): counselor exports a custom report from IC quarterly, uploads at </admin/import>. Free, works now, no IT integration project needed.

Phase 2 path (when IT is ready): OneRoster API or nightly SFTP-export job replaces the manual upload. Same destination tables, same point math, just automated.

A sample CSV in the exact format is committed to the repo at <docs/sample-ic-data.csv> — IT can use it as a target for the IC export query.

Why this benefits GNPS

1. **Closes a competitive gap.** Peer Long Island districts (Seaford, 3 Village, Connetquot) already publish Seal of Civic Readiness pages. GNPS has no program; this fixes that on a fast timeline.
 2. **Better than peer implementations.** Peer districts use Microsoft / Google Forms feeding counselor inboxes — no central tracker, manual roll-up, end-of-year crunch. The proposed system gives counselors a live roster and produces NYSED audit packs automatically.
 3. **Open-source positioning.** Repo is MIT-licensed and forkable. Other NYS districts can adopt the GNPS implementation rather than building their own — a leadership artifact for Curriculum & Instruction and the Board.
 4. **Phased risk.** Phase 1 is reversible. If the system doesn't deliver value in pilot, IT involvement never escalates. If it does, Phase 2 promotion is well-scoped.
